

Back Plate and Sign Frames

Back Plates

Back plates are made of .063 flat aluminum. Measurements for the back plates are for the sign blade going onto the back plate. Back plates are oversized to provide a 1" wide border on all sides. For example, BP24-OCT is actually 26" wide, allowing for a 1" border around a 24" octagon sign. The traffic back plates come undrilled for custom mounting.

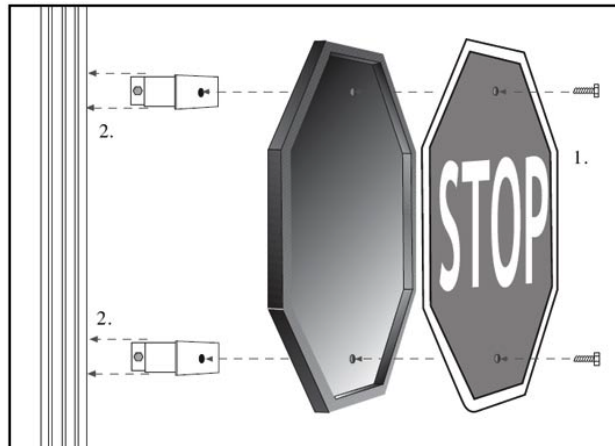

Sign Frames

The measurements shown are for the sign blade going into the frame. Sign frames have a 1" raised framed edge on all sides. The sign frames come undrilled for custom mounting.

Mounting Diagram

- Attach Back Plate or Sign Frame to a set of TSB1 brackets (sold separately)
- Side TSB1 brackets over post and tighten clamp with supplied bolts and nuts
